# 1. Introduction

## Document Purpose

This document communicates the business requirements and scope for developing the Online Pet Shop System. The scope of this document is to define the functional and non-functional requirements, business rules, and other constraints.

## Project Background

The current market lacks a centralized platform for pet enthusiasts to find, match, and purchase pets and related supplies. Pet owners and potential pet owners often face difficulties in locating authorized pet shops, finding pet matches, and purchasing specialized pet supplies. This system aims to streamline these processes, providing a user-friendly interface for finding pets, matching pets, purchasing supplies, and locating pet clinics.

## Goals of the Project

The main objectives of this project are:

- To develop a website that allows users to find pets based on their city and preferences.
- To implement a matching system for pet owners seeking to match their pets with others.
- To provide a platform for purchasing pet supplies tailored to specific pets.
- To help users locate pet clinics in their city.

# 2. Business Requirements Overview

The Online Pet Shop System is a public web application.

Initially, the system will target users within a specific geographic region, but it will be scalable for a wider audience.

There are three main user types:

1. General Users (pet buyers and owners)
2. Admins
3. Sellers

The system will connect these users efficiently, providing an easy-to-use platform for all pet-related needs.

### 3. Functional Requirements Overview

The Online Pet Shop System consists of seven modules described below:

1. **User Module**
2. **Seller Module**
3. **Find a Pet Module**
4. **Pet Match Module**
5. **Pet Supplies Module**
6. **Find a Pet Clinic Module**
7. **Admin Module**

#### 3.1 User Module

##### **User Registration and Login:**

- Users can register for an account using email or phone number.
- Users can log in using their credentials.

##### **Profile Management:**

- Users can create and manage their profiles, including personal information and pet preferences.

##### **Order History:**

- Users can view their past orders and transactions.

##### **Wishlist:**

- Users can add pets or pet supplies to their wish list for future reference.

#### 3.2 Seller Module

##### **Seller Registration and Login:**

- Sellers (supply vendors) can register for an account using business details.
- Sellers can log in using their credentials.

##### **Product Management:**

- Sellers can add, edit, and remove products they are selling.
- Sellers can manage product categories and inventory levels.

**Order Management:**

- Sellers can view and manage orders placed by users, including order status updates.

**Profile Management:**

- Sellers can update their business information and profile details.

**3.3 Find a Pet Module****User Login:**

- Users can log in to their accounts.

**City Selection:**

- Users can choose their city from a dropdown menu or map interface.

**Pet Selection:**

- Users can select the type of pet they are interested in (e.g., dog, cat, fish) and refine their choice by breed (e.g., Labrador Retriever, Siamese).

**Authorized Pet Shops:**

- Based on the chosen city and pet, the system will display a list of authorized pet shops in the area.

**3.6 Find a Pet Clinic Module****City Selection:**

- Users can choose their city from a dropdown menu or map interface.

**Pet Clinic List:**

- The system displays a comprehensive list of pet clinics located in the chosen city.
- Features like clinic information, user reviews.

**3.7 Admin Module****Admin Login:**

- Admins can log in to their accounts with elevated privileges.

**User Management:**

- Admins can view, add, edit, and delete user accounts.
- Admins can manage user roles and permissions.

**Pet Shop Management:**

- Admins can update pet shop details and ensure they meet the required standards.

**Product Management:**

- Admins can add, edit, and remove products from the pet supplies inventory.
- Admins can categorize products and manage stock levels.

**Pet Clinic Management:**

- Admins can manage pet clinic listings, ensuring all necessary information is accurate.
- Admins can handle user reviews and feedback regarding pet clinics.

**System Monitoring:**

- Admins can monitor system performance and user activity to ensure smooth operation.
- Admins can address any technical issues or user complaints promptly.

## **4. Non-functional Requirements**

- The website should have a professional design with a consistent look and feel.
- Users should have no limitations for accessing the application through the Internet.
- The system should be designed to support scalability, targeting up to 10 million users.
- The site must follow general usability guidelines for menus, navigation, colors, links, and other actions provided on the screens.
- The system should enable users to complete tasks with a minimal number of steps.

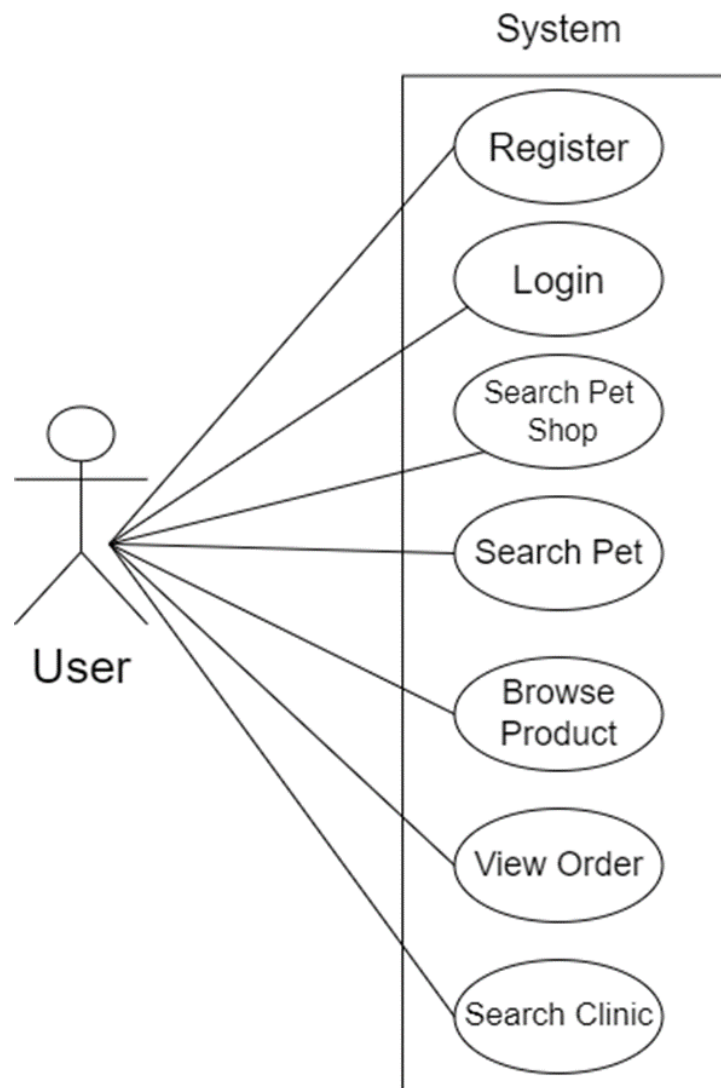

**Use case for user:**

## Conclusion

PetPalace is a comprehensive and innovative platform designed to cater to the diverse needs of pet owners, sellers, and service providers. It integrates various functionalities such as pet and pet supply purchases, pet clinic services, and user management into a unified system. By leveraging modern technologies like .NET, RESTful APIs, and relational databases, PetPalace offers a seamless and user-friendly experience for all stakeholders involved.

### Key Features:

#### 1. Pet and Pet Supply Purchases:

- Users can easily browse and purchase pets and related supplies, with detailed filters ensuring they find exactly what they need for their specific pet type and breed.
- Sellers can manage their inventory, including adding, updating, and deleting products, ensuring that the platform always reflects accurate product availability.

#### 2. Pet Clinic Services:

- Pet owners can find and book appointments with local pet clinics, enhancing the well-being of their pets with easy access to professional care.
- The system provides a robust backend for clinics to manage appointments and services offered.

#### 3. User Management:

- The platform supports distinct roles such as buyers, sellers, and admins, with each role having access to tailored functionalities and privileges.
- A secure and efficient user authentication process ensures that data is protected, and users can easily manage their accounts.

### Technical Excellence:

- Backend: Built with a focus on scalability and security using .NET and Entity Framework, ensuring that the platform can handle a growing user base and data load.
- Frontend: The user interface is designed to be intuitive, ensuring a smooth user experience across different devices and browsers.
- Database Design: A well-structured relational database ensures data integrity and efficient querying, with tables designed to support the platform's diverse functionality.
- API Integration: RESTful APIs facilitate seamless communication between the frontend and backend, enabling real-time data updates and interactions.

### Business Impact:

PetPalace is not just a marketplace but a complete ecosystem for pet care, connecting pet owners with the products and services they need while providing sellers and service providers with the tools to reach and manage their customers effectively. This platform has the potential to revolutionize how pet care is accessed and delivered, making it easier, faster, and more convenient for everyone involved.

In conclusion, PetPalace stands as a testament to the power of technology in enhancing the pet care industry, providing a robust solution that meets the needs of modern pet owners and businesses alike.
